PROFESSIONAL SUMMARY

Mid-Level Mobile Software Engineer with 2+ years of production experience building scalable, enterprise iOS and Android applications using Flutter and Dart. Proficient in Clean Architecture, BLoC, Riverpod, FinTech payment workflows, and automated testing (Unit & Widget tests). Proven track record of architecting secure biometric 2FA systems, refactoring legacy codebases across 30+ modules, eliminating memory leaks for 60 FPS performance, and managing end-to-end releases on the Apple App Store and Google Play Store.

TECHNICAL SKILLS

- **Languages & Core:** Dart 3, Flutter 3.x, C++, Java (Basics), SQL, OOP Principles
- **Architecture & Testing:** Clean Architecture, SOLID, BLoC / Cubit, Repository Pattern, Dependency Injection (GetIt/Injectable), Unit Testing (mocktail/test), Widget Testing
- **FinTech & Security:** Payment Gateways (KNET), ZATCA E-Invoicing, Biometric 2FA (local_auth / FaceID / Fingerprint), OAuth2 / JWT Refresh Flows, OWASP Security
- **Networking & State:** RESTful APIs, Dio (Interceptors), SignalR Hubs (Auto-reconnect), WebSockets, Raw TCP/IP Sockets, Riverpod, Provider, Freezed Immutability
- **Storage & Cloud:** Hive, SQLite (sqflite), Flutter Secure Storage, Firebase (FCM, Crashlytics, Analytics, Auth), Google Maps API, Deep Linking (GoRouter)
- **DevOps & Tools:** Git, GitHub Actions (CI/CD), App Store / Google Play Deployments, Claude AI / Cursor (AI-assisted workflows), ScreenUtil, Localization (RTL/LTR)

PROFESSIONAL EXPERIENCE

Tidal Systems — Flutter Developer

Feb 2025 – Present

Cairo, Egypt

- Spearheaded the architectural migration of an enterprise HCM & ERP mobile application from monolithic setState to Clean Architecture with BLoC/Cubit across 30+ business modules.
- Engineered a high-throughput hospital ticketing display app using SignalR with self-healing auto-reconnection and automated wake locks for real-time operation.
- Developed an administrative biometric 2FA security system utilizing local_auth and zero-touch QR-to-OTP cryptographic validation handshakes.
- Built the TidalActivator licensing app with deep linking (App/Universal Links) and OAuth2 Bearer tokens for one-click license activation.
- Configured automated release pipelines, code signing, and Firebase Crashlytics telemetry for production deployments on Google Play Console and Apple App Store.

Code Icons — Flutter Developer

Jun 2024 – Jan 2025

Cairo, Egypt

- Architected a multi-tenant enterprise ERP client (Finance, HR Self-Service, Inventory) supporting 500–1,000 active business users.
- Integrated Saudi Arabian ZATCA e-invoicing compliance logic, handling real-time tax calculation and cryptographic QR code generation.
- Eliminated setState-after-dispose crashes and memory leaks by building a dependency injection graph with GetIt/Injectable and enforcing mounted lifecycle guards.
- Implemented offline-first persistence and optimistic UI caching using Hive and encrypted SharedPreferences.

AhdafWeb — Flutter Developer (Contract)

Jun 2024 – Jul 2024

Remote

- Engineered checkout and cart state management for an e-commerce platform (High Digital), integrating Kuwait's KNET payment gateway and Arabic/English localization.
- Developed a booking app (BeautyOn) integrating Google Maps API, real-time provider discovery, and Riverpod state management optimized for 60 FPS scrolling.

GenSystems — Flutter Developer Intern

Feb 2024 – Apr 2024

Remote

- Converted Figma design systems into responsive cross-platform UI workflows and custom Dart actions in FlutterFlow, connecting REST APIs and Firebase Auth.

TECHNICAL PROJECTS

Enterprise Café POS & Floor Management Engine

Independent System

Tech Stack: Flutter, Dart, BLoC, Fpdart (ROP), Freezed, Injectable, GoRouter Builder, Raw TCP/IP Sockets

- Engineered an enterprise POS system using Clean Architecture and Railway Oriented Programming (fpdart Either) for deterministic error handling.
- Developed LAN thermal printer communication using asynchronous raw TCP/IP socket streams and ESC/POS byte-protocol serialization.
- Built a local-first transactional state machine managing atomic multi-stage order lifecycles with granular Role-Based Access Control (RBAC).

EDUCATION & CERTIFICATIONS

- **Bachelor of Science in Computer Science & IT** — Damietta University | Graduated: 2023
- **Professional Flutter Diploma** — Route Academy | Nov 2023 – Apr 2024
- **Certified Flutter Mobile Developer** — Route Academy | **Complete Flutter Suite** — Udemy
